

### WINDHAGER LAUNCHES HIGH OUTPUT BIOWIN AT ALL ENERGY

Windhager UK, Stands F50, G40 and G60, All Energy Exhibition & Conference 2011

Leading supplier of sustainable heating systems, Windhager UK, will be launching the new compact, high output version of the company's successful BioWIN wood pellet boiler at this year's All Energy exhibition and conference, as well as exhibiting its full range of high quality wood pellet and log gasification boilers.

Extensively tried and tested, the pellet heating technology in the new BioWIN has been adapted especially for high performance, focusing on maximum operational safety, fuel efficiency and economic operation for cost savings.

The new BioWIN has 3 models in the range with outputs of 34kW, 45kW and 60kW with options up to 180kW for cascade systems, making it ideal for installations requiring a greater amount of energy. The ideal solution for large buildings, schools, commercial premises and district heating applications. The BioWIN is also available in a bespoke range of pre-packaged plant rooms for a turnkey solution, delivering an off-site constructed plant room direct to site.

The model features a new, patented, fully automatic pellet feed system not used on any other boiler system, to ensure that pellets are always topped up in the integrated pellet hopper on the appliance. The flexible pellet suction system uses up to eight extraction points, making the system incredibly reliable and space saving as pellet storage rooms incorporating inclined surfaces are no longer required and therefore providing greater pellet storage capacities.

An installation space of just 1.12m<sup>2</sup> is all that is required for the new BioWIN, all fully automated systems, an intermediate pellet hopper and a large ash box, allowing the high output BioWIN to be easily integrated into any space.
